## INDIVIDUAL PROJECTS

### FamilyCB

Growing up in a large family, we spent much of our quality time in the kitchen and cooking together. Now that we are grown, we find we aren't in the same place much but want to share recipes. I created FamilyCB, full CRUD app, as a way to share recipes with everyone. FamilyCB is a full stack Django web app styled with Tachyons and incorporates user specific data.

[github.com/chapmanjamesg/FamilyCB](https://github.com/chapmanjamesg/FamilyCB)

### TIPOFF

In my time in the restaurant industry I noticed that many of my coworkers struggled with keeping track of the tips made throughout shifts. TipOff helps keep track of tips, hours worked, and clients served.

- Full CRUD functionality on tips, notes, and clients pages using JSON server
- Graphs out by month the amounts and tips for the year using chart.js 2
- Styled using bootstrap and Tachyons
- Base code used: JavaScript and React.js

## EDUCATION

**Nashville Software School**  
Certificate, Apr 2020

**Cuyhoga Community College**  
Jul 2016-Sept 2019 | Information  
Technology (Java, C#, SQL, PHP)

**Dickinson College**  
Aug 2005-Dec 2008 | Economics

After working in the restaurant industry achieving the title of manager, I still found myself wanting more. I wanted something to be passionate about. I took a couple of classes in C# and HTML/CSS, and enjoyed using my imagination to create. I decided to take a chance, move 800 miles to a new city, and attend Nashville Software School. I want to use the team work instilled in me from the service industry, and combine that with my new technical skills to help create amazing applications.

## SOFTWARE EXPERIENCE

### JUNIOR FULL STACK SOFTWARE DEVELOPER

NASHVILLE SOFTWARE SCHOOL | SEPT 2019 - PRESENT

Intensive 6-month full-time software boot camp that focuses on training full stack web development for both individual and team based projects.

- Using the proper flow of code using Git/GitHub and managing projects with GitHub projects
- Building single-page applications using React, HTML, CSS
- Experience using Bootstrap and Tachyons for styling web applications

### GROUP PROJECTS

#### Nutshell

- With 3 teammates we created a single-page social platform that allowed users to add news articles, tasks, and share events and chat with other users
- Used React.js for presentation and JSON server for storage
- Personal contributions was to the chat and login/out

#### Nutshell using React.js

- With 3 teammate we recreated the original Nutshell, but focusing on using the React.js framework
- Personal contributions were messages and login/out

#### Keahua Arboretum

- With 4 teammates we inherited a code base based in python that was non functional.
- The main objective was to make this application functional.
- We were using vanilla Python with no framework
- Personal contribution was the feeding animal function

## WORK EXPERIENCE
