PROFILE

After working in the restaurant industry achieving the title of manager, I still found myself wanting more. I decided to go back to school and find something that I can be passionate about, which I found in the form of coding. I took multiple classes in C# and HTML/CSS, and found that I really enjoyed using my imagination to create. After this realization I decided to take a chance and move 800 miles to a new city and participate in the Nashville Software School. I want to use the team work instilled in me from the service industry, and combine that with my new technical skills to help create amazing applications.

CAPSTONE

TIPOFF

In my time in the restaurant industry I noticed that many of my coworkers struggled with keeping track of the tips made throughout shifts. TipOff helps keep track of tips, hours worked, and clients served.

- Full CRUD functionality on tips, notes, and clients pages using JSON server
 - Graphs out by month the amounts and tips for the year using chart.js 2
 - Styled using bootstrap and Tachyons
 - Base code used: JavaScript and React.js
- github.com/chapmanjamesg/tipoff

SOFTWARE EXPERIENCE

JUNIOR FULL STACK SOFTWARE DEVELOPER

NASHVILLE SOFTWARE SCHOOL | SEPT 2019 - PRESENT

Intensive 6-month full-time software boot camp that focuses on training full stack web development for both individual and team based projects.

- Using the proper flow of code using Git/GitHub and managing projects with GitHub projects
- Building single-page applications using React, HTML, CSS
- Experience using Bootstrap and Tachyons for styling web applications

GROUP PROJECTS

Nutshell

- With 3 teammates we created a single-page social platform that allowed users to add news articles, tasks, and share events and chat with other users
- Used React.js for presentation and JSON server for storage
- Personal contributions was to the chat and login/out features
